Study design and units of analysis

134 underlying clips
90 + 44 source collections
All depict performed gestures

Human reference
230 retained participants
4,600 evaluations × 7 scores

Model benchmark
12 main configurations
4 model families

Label manipulation
14 shared clips × 2 labels
Different humans per version
15th control: models only

Standard pairings
134 items × 7 dimensions
Error, bias and correlation
Seven separate dimensions

Matched control analysis
Same footage across labels
Human and model score drops
Error on low-rated pairings
